Segmented neutrophil....5	Lymphocyte.....10
Eosinophil.....2	Monocyte.....0
Basophil.....0	Plasma cells.....0
Undifferentiated cells..0	Other cells.....0

Myeloid/Erythroid ratio: 1.6/1

MICROSCOPIC DESCRIPTION

The peripheral smear shows normochromic, normocytic erythrocytes. Polychromatic red cells are not easily detectable. The platelet count appears within normal limits. The white count appears adequate with a differential of 51.8 neutrophils, 1.8 eosinophils, 1.0 basophil, 32.8 lymphocytes, and 12.6 monocytes.

Marrow smears and touch preps reveal cellular spicules with trilineage maturation and an M:E ratio of 1.6:1. the myeloid and erythroid series appear left shifted. Scattered normal appearing megakaryocytes and mature lymphocytes are seen. No atypical lymphoid aggregates are noted. Stainable iron is present.

The biopsy and clot sections reveal normocellular marrow (40-50%) with trilineage maturation. Scattered megakaryocytes are seen. No lymphoid aggregates are noted.

--- FINAL DIAGNOSIS ---

Bone marrow, left iliac crest. (aspirate, biopsy, touch preps)

- Normocellular marrow with trilineage maturation
- Stainable iron is present
- No evidence of lymphoma
